

# ARROW

## Using ARROW Raptor tooling in CNC Nesting.

---

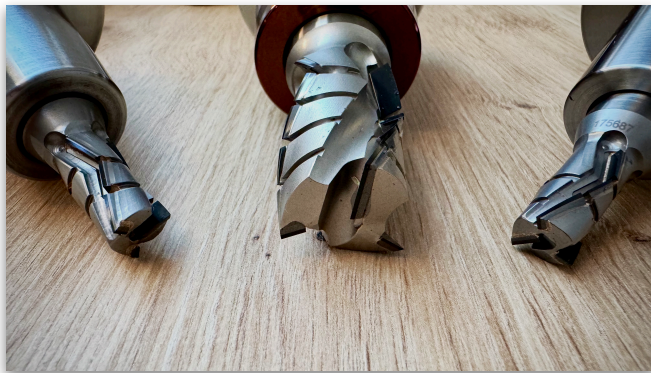

The Arrow Raptor range of PCD cutting tools, are specifically designed for high-production CNC nesting environments. But are suitable for all.

These tools will give you the edge over your competition and help you achieve maximum return on investment from your machine. For manufacturers machining MDF, MFC, laminates, and composite boards on flatbed-Pod/rail CNC routers, it is essential that you give your machine the tools it needs.

“The machine only takes the tool to the job, it is the cutting tool that does the work!”

With a general guideline of 20K rpm-20/m/min, instead of the 30 sheets achievable with carbide, you will be able to cut hundreds of full sheets before you need to change tools. PCD tools can cut up to 10 times what carbide will cut! They don't cost 10 times as much. They also save you machine time and the cost of replacing scrap panels.

The tools have been designed so that you can cut 8mm-22mm boards with the same tool. Ideal for those with limited carousel capacity.

Enhanced tool performance.  
Enhanced you.

Put the sharpest tool in the box on  
your machines.

Use Raptor UltraNest & UltraNestPro

Obsidian, the sharpest material  
known!
